Example
iTube is the semi-automatic wrapping machine for tubes, bars, profiles and other long goods. Also for plates up to a width of 1200 mm.

The wrapping unit can be completed with different types of conveyors such as roller-, lamella- or belt conveyors for different lengths. Automatic start of the wrapping process as well as automatic film cutting is an option.

A plastic film applicator to close the entry and the exit of the bundle is also a possible option. The operations are controlled by a standard control panel or a touch screen.

The iTube system is very easy to install and can be put into use in a matter of hours.

### iTube Packaging System
