Innovative and customer specific packaging solutions

Interwell Industrial Packaging Solutions

Correct packaging and innovative packaging solutions minimizes the total cost

Packaging and transport of industrial products is done effectively only with an overview of needs throughout the supply chain. Interwell Industrial Packaging Solutions will provide customized solutions for packaging and packaging that reduces your company's overall costs.

Interwell Packaging solutions is a business unit within the international Lamiflex Group. We have extensive

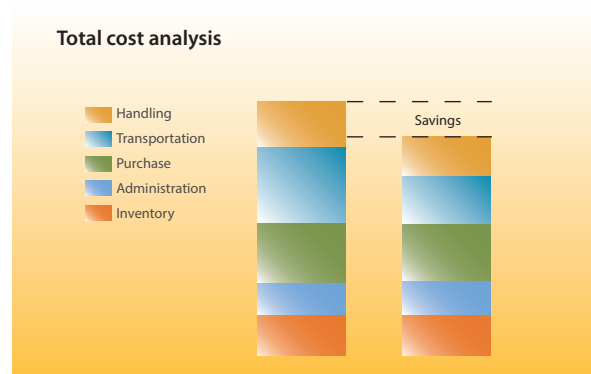

knowledge and wide range of material selection to create complete and innovative solutions.

Let our expertise be your benefit by making a total cost analysis of packaging logistic situation. The customized solutions we develop is complete and cost effective. We have customers within all type of industries from manufacturing industry to IT / telecom and pharmaceuticals.

Extremely strong and still low weight

Choose the Interwell concept if you take into account:

- The environmental aspect
- Transportation costs
- Packaging durability and protection for your products
- The weight of the packaging, for example in air transport
- Very easy to use and handle
- Short lead times and delivery reliability
- The availability of customized solutions in short or long series

Voices from our customers

“ Earlier, we had many complaints on our products for export, but after we had switched to Interwell in 1995, we have not had any complaints that are caused by faulty packaging. This packaging style is very valuable to us because complaints are very costly when the products have such a high value.”

Sten Håll, supervisor at Metso Paper i Sundsvall, Sweden

Metso Paper manufactures pulp processing machines supplying a worldwide market. It implies that they need quickly and safe delivery of spare parts for the pulp industry at present in 27 different countries. For packaging they use, among other material, Interwell.

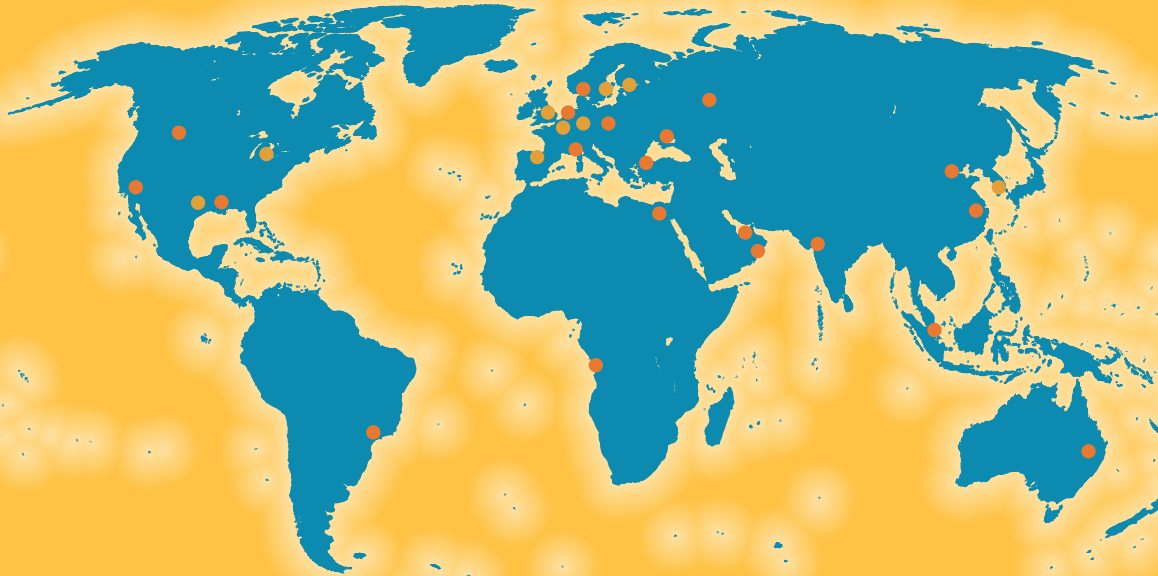

“ We have used the Interwell box since the early 1990s and we have never had a complaint because of faulty packaging. It's very important for us because we sell high value-added products and it can quickly become large sums if there would be a claim. The Interwell box is easy to use, with loose bottom and removable lid. It can withstand stacking very well, which is important for us, who handle heavy material. The box will never be questioned in terms of heat treatment * and it is recyclable in all countries, which also is a big plus for us. Some of our deliveries are by air, and then the light weight is an additional positive aspect.”

Mats Björkegren, Quality Manager at Swedev i Munkfors, Sweden

*Heat treatment for insect control

Swedev in Munkfors produces Doctor Blades for the printing industry. Those are customized thin steel sheets, common thickness is 0,15 mm which then is reduced down to half the thickness. It is used to scrape off excess paint in printing presses. 97% of sales are exported to over 70 countries. Rachel steel is delivered in rolls in plastic boxes which are then packed into the Interwell box. It packs four boxes in a box, four layers of six boxes on each pallet. In 2008 7.500 Interwell boxes were delivered.

Since 2009 Interwell is a part of the packaging company group Lamiflex. Parent company is Lamiflex AB with Headquarter in Nyköping. Here also the product Lamiflex is manufactured, which has given its name to the group. It is a mechanical protection of composite materials, with a core of board, covered with a protective film or paper. The group offers complete solutions in various materials, many of which are patented for packing of industrial products.

The trend goes towards more customized, specific solutions where Lamiflex product and application engineers play an important role. As a customer of the Interwell, you get access to the entire Group's expertise in terms of materials and applications.
