Coil Packaging Solutions – For safe transport of steel and aluminum coils

Preventing corrosion

Plastic stretchfilm protects coils from scratches but is also a vital part of corrosion protection. Tight wrapping through the eye minimizes exposure to air humidity and pollutants that contribute to corrosion. Lamiflex offers Lamistretch film, with or without reinforcement, for automated stretch-wrapping. Lamiwrap is used for manual wrapping.

All stretchfilms are available with the VCI additive that stops or slows down the corrosion process. The VCI is released continuously from the wrapping material for lasting corrosion protection.

Coil corrosion protection with stretchfilm wrapping and VCI

Automated wrapping for larger volumes and consistent quality

MultiWrapper

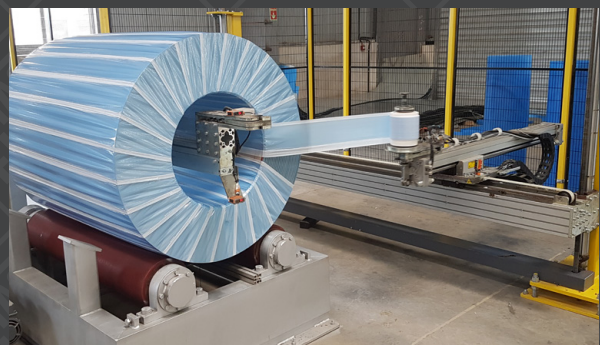

The MultiWrapper is an automated coil packaging solution designed for coil production with high output and high requirements on consistent packaging quality. Each coil is wrapped tightly with stretch-wrap, through the eye, to prevent damage and corrosion during transport and storage.

The MultiWrapper can be placed either stand-alone or integrated in a line. Patent pending.

PushWrapper

The PushWrapper is our entry level automation solution for stretchfilm wrapping of coils. It is easily operated by one person and if you need to increase capacity, two operators can manage up to four machines.

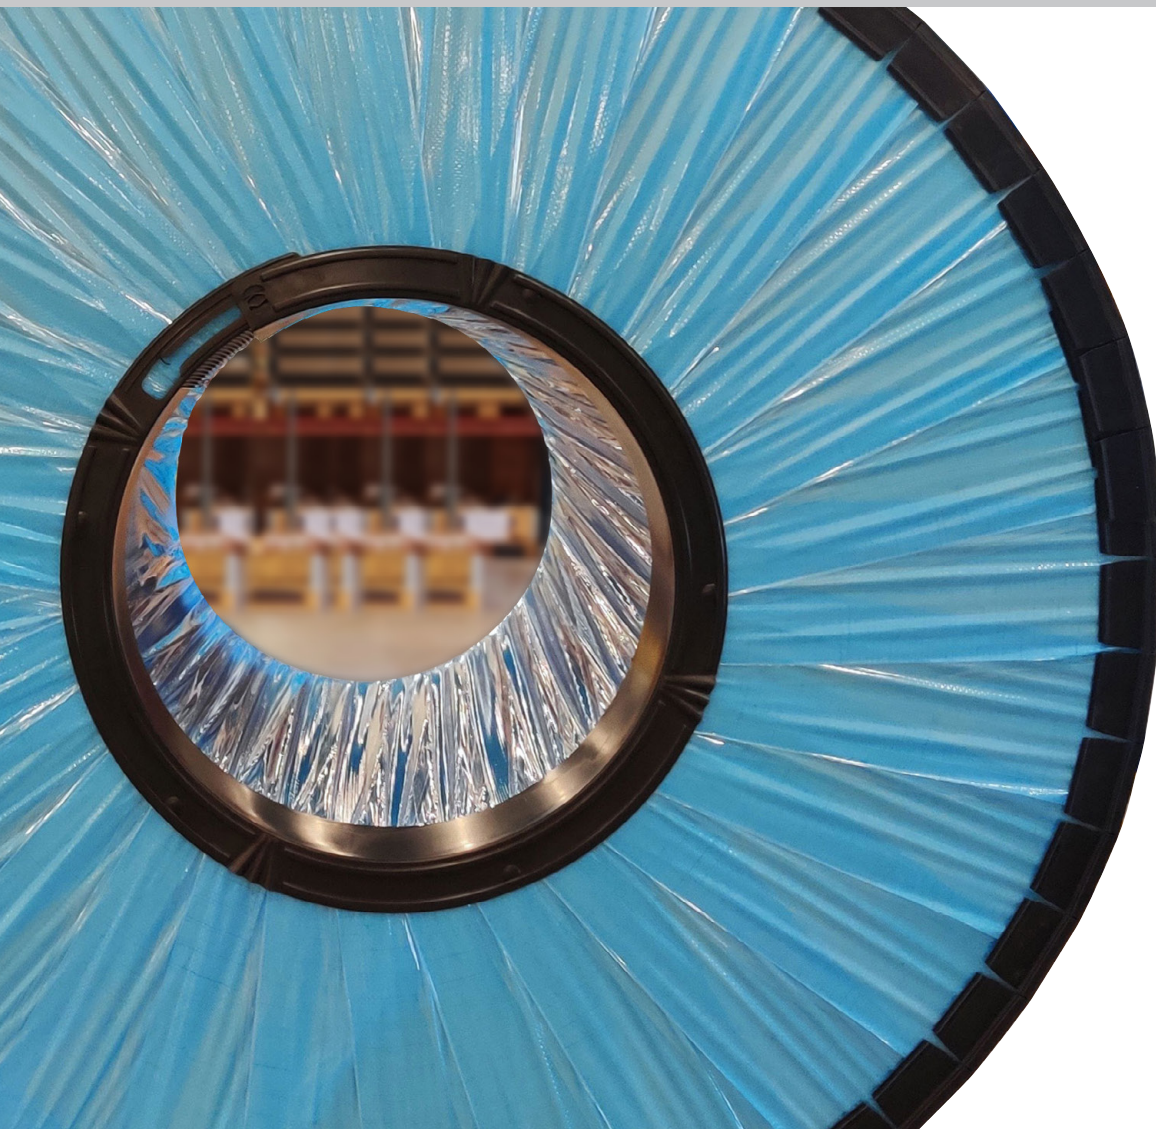

Lamiedge edge protection

Protect the inner and outer coil edges from mechanical damage using Lamiflex's recyclable plastic edge protection products: Lamiedge PBP and POP. Outer edge protection is also available in a carton-based version: Lamiedge COP.

Lamiedge DSP protects the coil eye when lifting and moving coils within your facility. It is very easy to apply and remove, and is designed to be used multiple times.

Coil edge protection - protects from mechanical damage to inner and outer edge

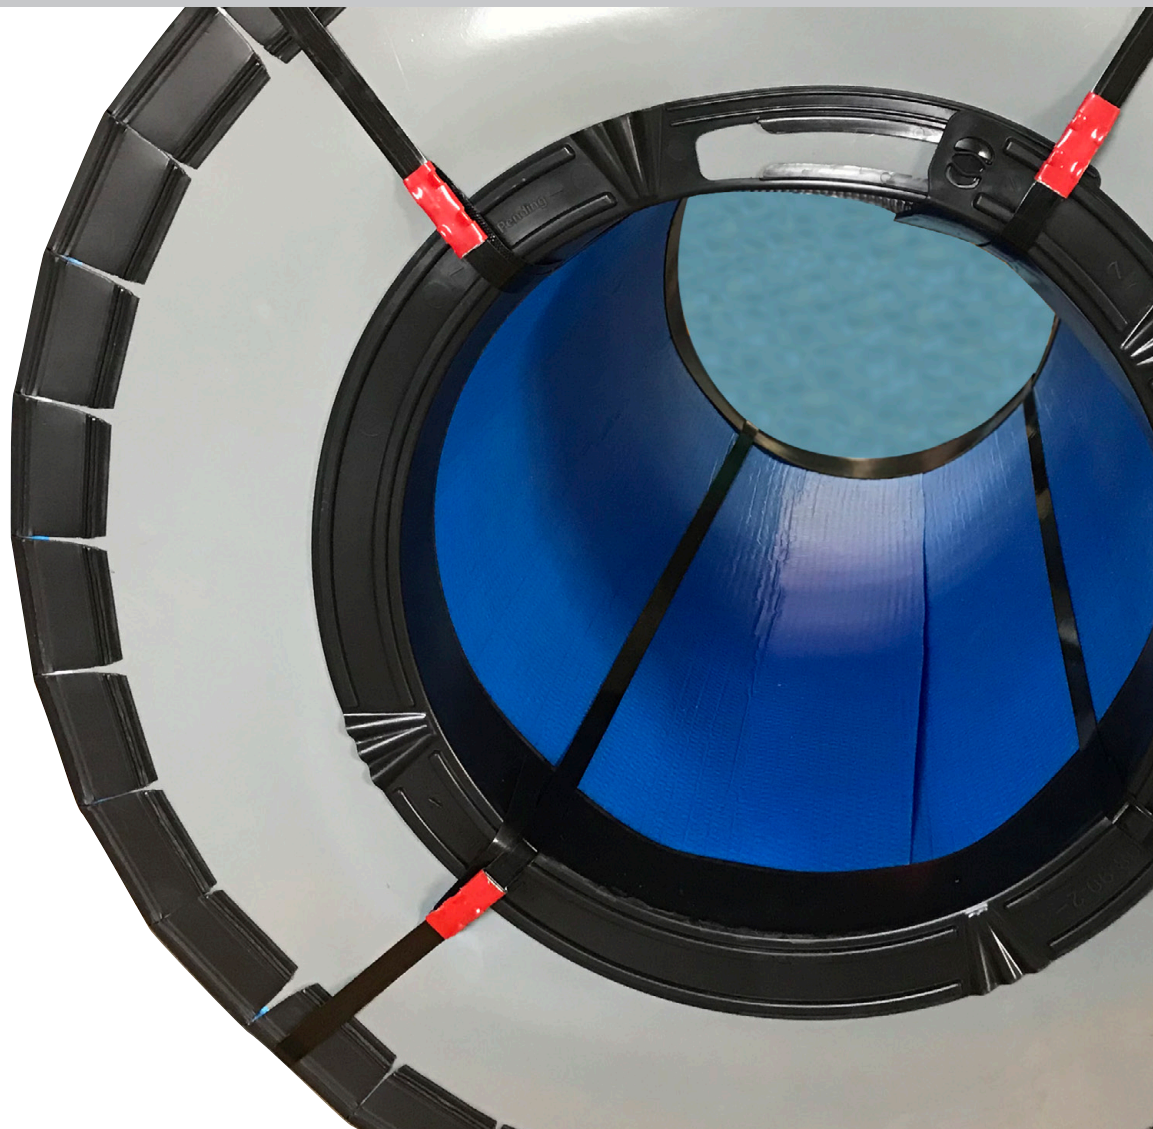

Lamishield body protection

Lamiwrap or Lamistretch film protects your coils from corrosion and scratches during transport. For additional protection against mechanical damage, add Lamishield side, mantle and eye protection.

Coil body protection - protects from corrosion, dents and scratches

Coil packaging examples - Packaging adapted to every transportation need

Local transport

- Lamistretch film with VCI
- Plastic inner edge protection

Long-distance transport

- Lamistretch film with VCI
- Plastic inner edge protection
- Plastic outer edge protection

Export

- Lamistretch film with VCI
- Plastic inner edge protection
- Plastic outer edge protection
- Plastic body protection on the sides, on the mantle and inside the eye

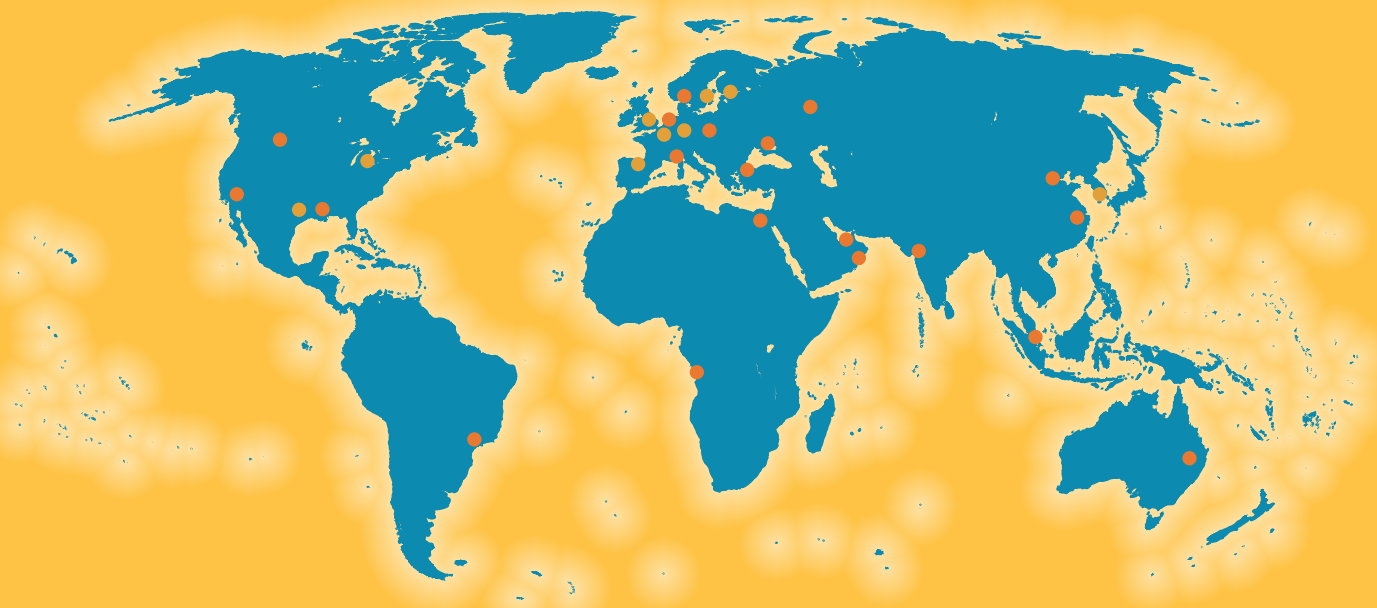

The Lamiflex recycling concept

The Lamiflex recycling concept helps customers and end customers manage the recycling of coil packaging materials, also where the local recycling infrastructure is insufficient for the volumes.

The end customer will collect and separate used plastic edge protection which is picked up and brought to a Lamiflex recycling center.
