

LAMIFLEX
GROUP

Lamiflex – Heavy-duty packaging for long, bulky or cylindrical goods

Lamiflex

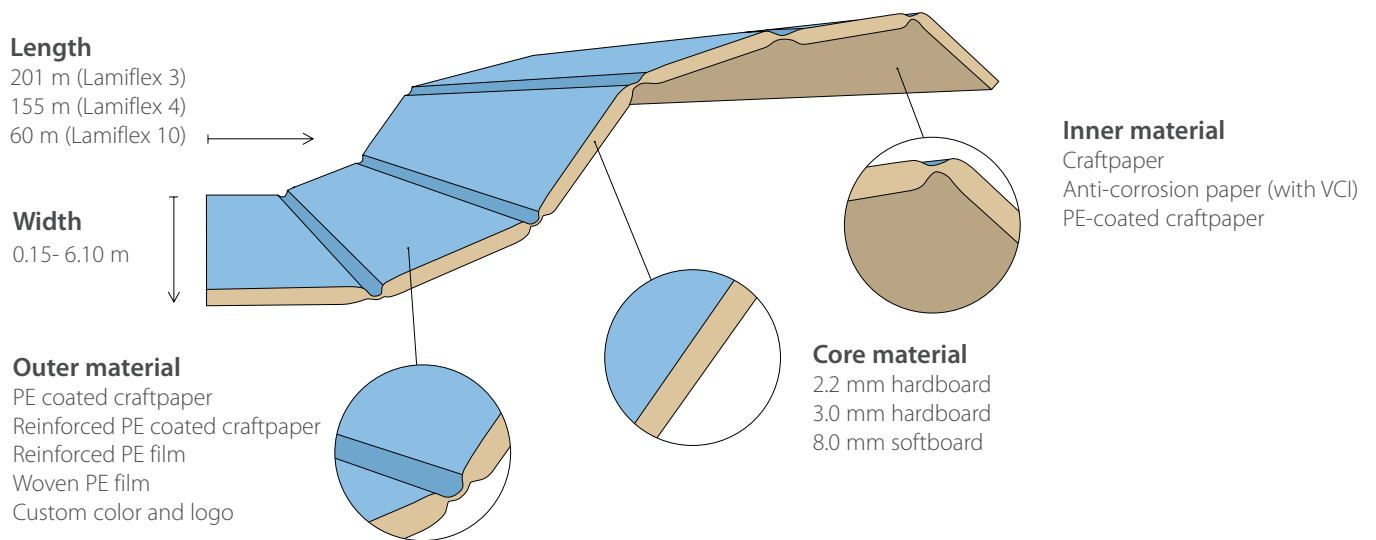

Lamiflex is made from hardboard strips, lamellas, with an inner and outer material that connects the lamellas to form a flexible, yet sturdy packaging material that protects your goods against impact damage and scratching.

Benefits

- Heavy-duty protection against impact damage
- Provides surface protection
- Fits individual bundle sizes and cylindrical shapes
- Easy to use, just cut to length & tape to close
- Lightweight material
- Customized widths to minimize scrapping
- Compact storage

Product variations and options

Lamiflex is available in many variations, with different thickness, width and coating on the outside and inside.

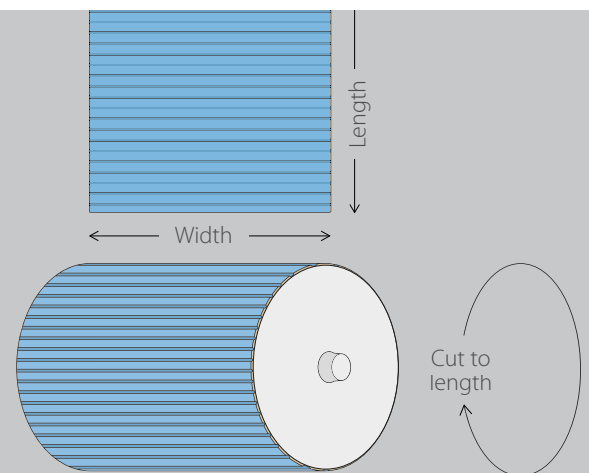

Find your Lamiflex width and length

Order the width to fit the size of your product. The total length that fits on the delivery pallet is dependent on which Lamiflex thickness you choose. The product can be cut between any two lamellas for custom lengths.

Example

For a cylinder shaped product, the width of Lamiflex should match the length of your product.

Cut the Lamiflex between two lamellas to fit the circumference of your product, allowing for a 20 cm overlap.

Application examples

Tubes & bars

Lamiflex fits equally well for square, hexagon-shaped or round bundles of tubes and bars and does not add any bulkiness or excess weight.

Oil & gas downhole tools

Lamiflex with VCI corrosion protection, a PE coating and sea water proofing is used for sand screens, packers, linear hangers and similar items, offshore and onshore.

Rollers, shafts & cylinders

Lamiflex can be order to fit the length of you product perfectly, then cut to length in order to wrap around the circumference with an overlap.

Cable drums

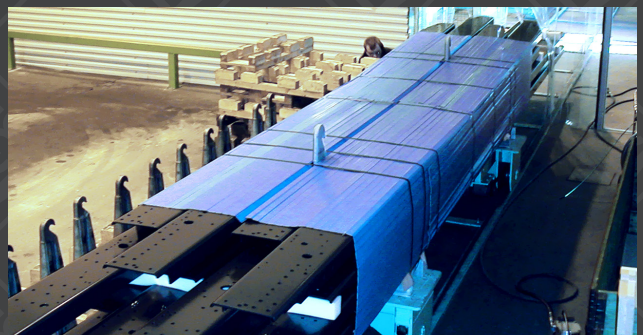

Lamiflex is quick and easy to wrap around the cable drum, and secure with tape or straps. No wooden crates are necessary, no nails needed that may damage the cable.

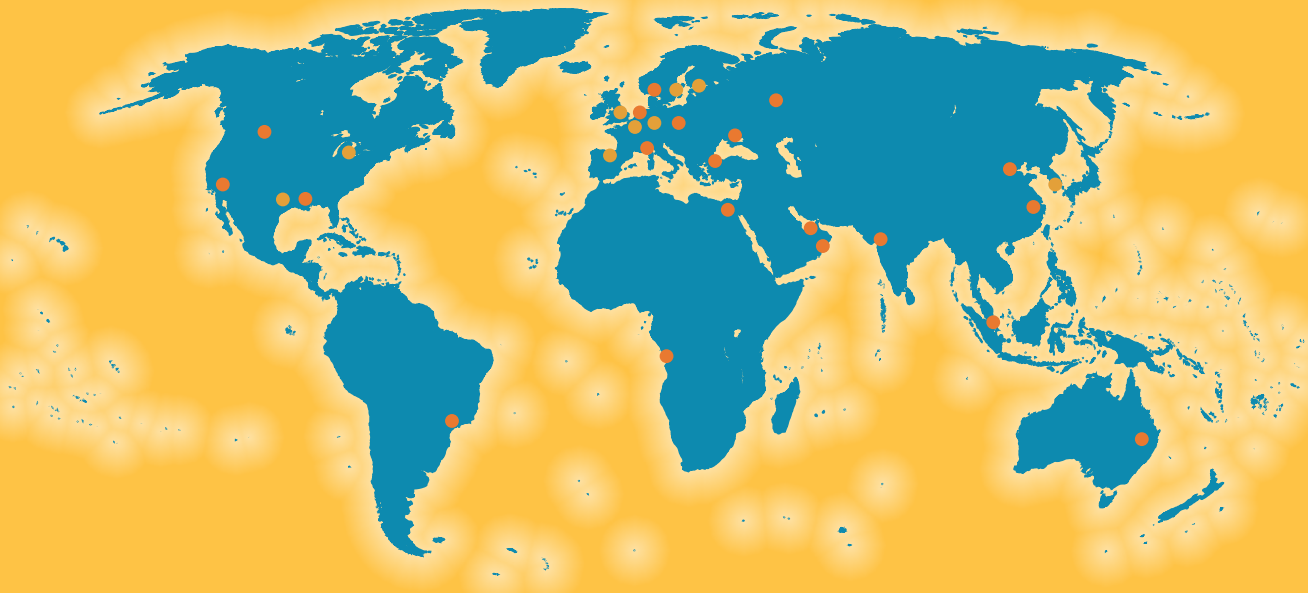

Other goods

Lamiflex is delivered fan folded on a pallet

Lamiflex is suitable for other long or bulky goods and works equally well for square, hexagon-shaped and cylindrical shapes and bundles.
